

## News Release

### **St. Paul Travelers Selects Adaptik's PolicyWriter as a Policy Administration Platform**

**BETHLEHEM, PA, April 5, 2006** – St. Paul Travelers (NYSE: STA) has selected Adaptik's PolicyWriter software as a platform for policy administration. A project is currently underway to improve and potentially replace existing policy administration systems.

"Our goal is to attain dramatic improvements in business functionality and speed-to-market abilities while simultaneously reducing system maintenance costs," said William Bloom, St. Paul Travelers chief information officer. "We examined several alternatives including extending the life of our legacy systems and concluded that PolicyWriter provides the quickest and the most effective way to achieve our strategic business objectives."

Over the past several months St. Paul Travelers has conducted a thorough examination of PolicyWriter. The system's unique abilities in policy processing, product configuration, rule reapplication, system interfacing, and configuration versioning were particularly scrutinized. PolicyWriter was also subjected to performance and scalability tests to confirm its suitability for large volumes of agents and policies.

"We researched all areas of potential concern and were impressed with the speed, functionality, flexibility, and comprehensiveness of Adaptik's software," stated William Awad, St. Paul Travelers vice president of application architecture. "PolicyWriter is a next-generation system that we believe will meet our aggressive business needs."

PolicyWriter is built on Adaptik's patented "Adaptive Application" technology which offers unprecedented configuration abilities that expedite system implementation and maintenance. "We found that lack of flexibility is the root cause of most problems with existing policy administration systems," said John Pettit, president of Adaptik. "Resolving this issue in a fundamental way enabled us to also address a number of other seemingly unrelated issues. As a result, PolicyWriter can help insurers tackle long standing business needs and drastically reduce systems maintenance budgets."

Located in Bethlehem, PA, Adaptik Corporation provides highly flexible and cost effective software solutions to property casualty insurers. For additional information, visit [www.adaptik.com](http://www.adaptik.com) or call 800.306.1062.
